ALCiE Integrated Solutions Announces Internal Certification Of ALCiE Solutions Using Windows XP Professional

Montreal, Canada - May 30, 2004 - **ALCiE Integrated Solutions, Inc. (AIS)**, a provider of advanced business solutions, enterprise analytics, and integration services, today announced that AIS certifies it's **ALCiE Enterprise** and **ALCiE-SME** products for **Windows® XP Professional**. The certification process that followed internal guidelines assures customers of ALCiE that all related Modules and Suites across the entire ALCiE product line will work to the highest level of compatibility available with Windows® XP Professional. Prior to this certification, ALCiE products had been successfully tested and certified by AIS's Research and Development division on previous Windows Operating Systems, which included Windows® 2000 Professional, Windows® 98, and Windows® NT.

"The entire ALCiE product line recently went through extensive testing and we can now certify that our products work on this operating system," said Anthony Paraskevas, Vice-President of Marketing and Business Development. "Many organizations are deciding how and when to migrate to Windows® XP Professional, especially with the recent Windows NT 4.0 end-of-life announcements. Furthermore, certification of third-party operating systems and tools helps to reassure our current and future clients that migration will proceed smoothly regardless of the standards that they are currently reviewing. We at ALCiE recognize the investments that our clients have made and will strive to simplify their migration options to take advantage of those investments".

Testing for the Microsoft Windows certification program was conducted in-house by AIS's Research and Development division headed by Samuel Tadevosian, Senior Director of Information Technology and Research. "We put our entire ALCiE product line through our rigorous internal testing methodology to prove that they measure up to Microsoft's standards for applications running within a Windows® XP Professional environment," said Mr. Tadevosian.

"Current ALCiE products are developed with **Oracle** technology using **Oracle Tools**, and deployed on **Oracle RDBMS 8i**, **9i**, and **10g**" stated Mr. Tadevosian. "Our team tested all current features and functionalities using our latest versions of ALCiE Enterprise Edition™ , ALCiE Standard Edition™ and ALCiE-SME Edition™ ", he added. "The test we carried out certified all modules and suites for Windows® XP Professional".

"Certification of our products for Windows® XP Professional is important to our customers," said Peter Nikolantonakis, Director of Product Management. "With this validation, Windows® XP Professional and Windows® 2000 users can be assured that all ALCiE solutions have met important standards for reliability, as defined by our standards which comply with Microsoft. Furthermore, our customers can expect ALCiE 's products and their features to continue supporting the latest Microsoft platforms in addition to other platforms such as **UNIX**, and **LINUX**."

About ALCiE Integrated Solution :

ALCiE Integrated Solutions, a provider of advanced business solutions, enterprise analytics, and integration services offers a unified family of ALCIE ® enterprise data management software suites, analytics, automated reports, and related business and data solutions. ALCIE 's Enterprise Suites are integrated software modules based on advanced Oracle technology, which are quickly bridged into a company's existing legacy systems taking advantage of past IT investments and optimizing its business data process cycle. The company's software products seamlessly ensure rapid access of data, files, and business-critical reports, all on a bullet proof and reliable database architecture.
